FUNDAMENTAL MECHANICS
Phys 131   Fall 2016

Instructor:	Professor David Collins
Office:	WS 228B
Phone:	248-1787
email:	dacollin@coloradomesa.edu
Office Hours:	M 2 – 3 pm, T 11am – noon, R 10 – 11am, F 11am – noon, 2 – 3pm
Class Meetings:	MTWF 9:00-9:50am (section 001), MTWF 10:00-10:50am (section 002), WS 264
Course Website:	http://www.coloradomesa.edu/~dacollin/teaching/2016Fall/Phys131/index.html
Required Text:	R. D. Knight, *Physics for Scientist and Engineers,* Vol 1, 4ed, Pearson (2017).

Overview

Does Earth move? Does the Moon move? If so, how and are there causes or reasons for this motion? Are the basic rules that govern their motion the same as those for other objects such as a flying baseball, or water flowing through a pipe? What keeps an aircraft aloft? Are there limits to the efficiency of its engines? What is the nature of light? Why do some elements but not others conduct electric currents well? Why are we convinced that atoms exist? What are the fundamental particles from which all matter is built? Are there limits to our universe and could we learn them?

Physics addresses such questions by combining observations, results of experiments, and conceptual and mathematical notions into coherent theoretical schemes. The conceptual underpinnings of the physics we use today originated in the 17$^{\text{th}}$ century, when Newton and others produced a framework for understanding much of the physical world. Newtonian mechanics, still a cornerstone of physics, successfully explains a great diversity of physical phenomena and enabled the development of much modern technology.

Phys 131 is an introduction to Newtonian mechanics. You will discover the meaning and uses of concepts such as acceleration, force, momentum, and energy and apply them to assess physical situations and describe physical phenomena. You will see that they provide a simple and elegant framework for understanding the physical universe.

The course will cover:

1. Motion: one and two dimensional kinematics.
2. Vector algebra.
3. Newton's system of mechanics and Newton's three laws.

4. Work and energy, energy conservation.

5. Momentum conservation.

6. Rotational kinematics and dynamics, angular energy and momentum.

7. Newtonian gravitation.

Course Structure

The Monday, Wednesday and Friday class meetings will usually be in lecture format. You will be expected to study the relevant sections of the text before class meetings.

Most Tuesday meetings will consist of a discussion/problem session during which you will work in small groups (with the instructor's help) on pre-assigned problems. You will be expected to attempt these **before the Tuesday class meeting.** There will be a short quiz covering the material at the end of the discussion session.

Assignments, Quizzes and Exams

1. **Warm Up Exercises:** Warm up exercises, available on the course Desire 2 Learn (D2L) shell, are based on readings of the text and must be completed by 8:00am on the day on which they are due. Instructions and grading schemes for each exercise are provided on the D2L shell.

2. **Homework assignments:** Homework assignments will be due **by 5:00pm on the designated day**. You should work by yourself on the homework problems but collaboration with other students is acceptable. You can discuss the broad outlines of problem solutions with your colleagues but must write your final solutions independently. You are also encouraged to consult me for help with homework problems. You are not allowed to use any services which provide complete solutions to the problems assigned from the text.

3. **Quizzes:** There will be a short quiz at the end of each of each Tuesday discussion session.

4. **Class Exams:** There will be three exams during class on the following days:

Exam 1	**Friday 16 September 2016**
Exam 2	**Wednesday 12 October 2016**
Exam 3	**Friday 11 November 2016**

   Exams will be closed book and closed notes although you can use a formula sheet. Calculators will be allowed.

5. **Final Exam:** There will be a final exam at **8:00am on Wednesday 14 December 2016 (section 001) and 10:00am on Monday 12 December 2016 (section 002)**. The final will last one hour and 50 minutes and be comprehensive and closed book although a formula sheet will be allowed. Calculators will be allowed.

An undergraduate student should expect to spend on a minimum of two hours outside the classroom for every hour in the classroom. The outside hours may vary depending on the number of credit hours or type of course. More details are available from the faculty member or department office and in CMUs Curriculum Policies and Procedures Manual.

Grades

Your course grade will be composed as follows:

Component	Number in Semester	Points for Each	Total
Warm Up Exercises	15	2	30
Quizzes	12	5	60
Homework Assignments	10 $(11 - 1)$	15	150
Class Exams	3	70	210
Final Exam	1	150	150
All components			**600**

To get full credit (100%) for any question or problem your solution must be correct with a complete explanation. Partial credit may be given for incomplete or partly correct solutions. No credit (0%) will be given for problems not attempted, assignments not turned in or quizzes and exams missed without good reason.

Each homework set will be graded out of 15 points. Two problems which will be selected at random and graded for correctness and completeness, each out of 3 points. The remaining problems will be checked for completeness and assigned 9 points. Your single lowest homework score will be dropped at the end of the semester.

Every question on all other components will be graded for completeness and correctness.

Your total score out of 600 points will be converted into a percentage. The following letter grades, based on the percentage score, will be *guaranteed*:

90%	A
79%	B
67%	C
50%	D

It is possible that letter grades will be attained at lower numerical scores than those above. This depends on the difficulty of exams and assignments during the semester. The only exception is that an F will be given if your numerical score is less than 50%.

Student Learning Outcomes

The learning outcomes for this course are as follows. A student who has taken this course will demonstrate the ability to:

1. Translate between verbal and mathematical descriptions of physical situations. Apply mathematical reasoning, using algebra, trigonometry and calculus, to analyze these situations.
2. Articulate the arguments, verbal and mathematical, used to analyze physical situations.
3. Represent physical processes graphically and describe given graphical representations in physical terms.
4. Use calculus to describe and analyze physical situations.
5. Use the mathematics of vectors, vector algebra, products of vectors and vector components to analyze physical situations.
6. Distinguish between and relate various linear and rotational kinematic quantities.
7. Apply Newtons First, Second and Third Laws to analyze the dynamics of physical situations involving linear and/or rotational motion.
8. Apply the concepts of energy, work, the conservation of energy, and the conservation of motion to analyze the dynamics of physical situations involving linear and/or rotational motion

This course is part of CMU's essential learning curriculum and satisfies the following essential learning outcomes:

1. Demonstrate investigative and analytical thinking skills to solve problems.
2. Select and use appropriate information in an academic project.

This course contributes to the fulfillment of the following program learning outcomes for the BS in Physics degree. A student will have demonstrated the ability to:

1. Show fluency with the major fields of physics (classical mechanics, electromagnetism, statistical physics and quantum theory).
2. Use mathematical representations to analyze physical scenarios.

Policies

1. The Tutorial Learning Center (TLC) is a *free* academic service for all CMU students. Tutors are available in Houston Hall 113 on a walk-in basis for many courses. More information is available at www.coloradomesa.edu/tutoring or 248-1392.

   In coordination with Educational Access Services, reasonable accommodations will be provided for qualified students with disabilities. Students must register with the EAS office to receive assistance. Please meet with the instructor the first week of class

for information and/or contact Dana VandeBurgt, the Coordinator of Educational Access Services, directly by phone at 248-1801, or in person in Houston Hall, Suite 108.

Helpful advice on student success can be found at:

http://www.coloradomesa.edu/academics/documents/StudentSuccessatCMU_WCCC.pdf

2. **Attendance:** Attendance policies are described in the CMU catalog. You are expected to attend all the class meetings and attendance will be recorded. In case of illness or other emergencies you must be able to produce the appropriate documentation. There are other circumstances under which you can be excused but you must discuss these with me in advance. If you miss a class or lab for a valid reason, turn in any assignments due before the start of the next class. Assignments turned in beyond your return to class will not be accepted.

   You will not be allowed to take a class quiz unless you attended the entire discussion session. If you have a valid reason for missing a discussion session, then you will be allowed to make up the quiz but must do so by the time that you return to class.

   The dates of the class exams and final exam are set at the beginning of the semester and it will be assumed that these have priority over any other events (consult me about conflicts known at the start of the semester). If you miss an exam for illness, an emergency or any other reason, you must provide documentation that justifies your absence. If the reason for your absence is satisfactory to the the instructor, he will make an accommodation for the exam that you missed; times for any make-up exams will be decided by the instructor.

3. **Withdrawals:** There are several ways to drop this course. The deadline for dropping without penalty is **6 September 2016.** Please consult the CMU academic calendar and catalog for more details about adding and dropping courses.

4. **Electronic Equipment Use:** Generally the only electronic equipment that can be used during exams are calculators. During exams you will not be allowed to use any type of electronic equipment that allows you to communicate with other people or to store information which may be useful during the exam. Examples of such equipment include cellphones, smart phones, iPads, iPods and other similar devices that can record information or connect to the internet. The only exceptions are for students who have a documented disability and need a particular device as part of their disability accommodation.

5. **Academic Integrity:** You are expected to present your own work in assignments, exams and quizzes. Fabrication of data, plagiarism, and copying from anyone else, particularly in closed book exams, are serious violation of academic norms. CMU has extensive policies on these matters and penalties for infringement can be severe. For more details, consult the academic integrity policies in the CMU catalog.

Schedule

The following schedule is tentative, except for the dates of the class exams.

Week	Dates	Topic
1	8/22 – 8/26	Course overview, motion in physics (Ch 1.1 – 1.6).
2	8/29 – 9/2	Kinematics: one dimension (Ch 2.1 – 2.6).
3	9/5 – 9/9	Vectors, kinematics in two dimensions (Ch 3.1 – 3.4, 4.1 – 4.3).
4	9/12 – 9/13	Uniform circular motion (Ch 4.4 - 4.6). Forces (Ch 5.1 – 5.2).
4	9/14 – 9/16	Exam review, **Class Exam I**.
5	9/19 – 9/23	Newton's first and second laws (Ch 5.3 – 5.7, 6.1 – 6.4).
6	9/26 – 9/30	Newtonian dynamics, Newton's third law (Ch 6.6, 7.1 – 7.3).
7	10/3 – 10/7	Newton's third law, dynamics of circular motion (Ch 7.4 – 7.5, Ch 8.1 – 8.2).
8	10/10	Circular motion (Ch 8.2).
8	10/11 – 10/12	Exam review, **Class Exam II**.
8	10/14	Fall break (no classes).
9	10/17 – 10/21	Work and energy, power (Ch 9.1 – 9.6).
10	10/24 – 10/28	Energy, energy conservation (Ch 10.1 – 10.5).
11	10/31 – 11/4	Energy and forces (Ch 10.6 – 10.8). Momentum (Ch 11.1 – 11.4).
12	11/7 – 11/8	Rotational kinematics, center of mass (Ch 12.1 – 12.2).
12	11/9 – 11/11	Exam review, **Class Exam III**.
13	11/14 – 11/18	Rotational dynamics (Ch 12.4 – 12.8)
–	11/21 – 11/25	Thanksgiving break (no classes).
14	11/28 – 12/2	Rotational energy, angular momentum (Ch 12.3, 12.9 – 12.11).
15	12/5 – 12/9	Gravitation, oscillations, final review (Ch 13.1 – 13.6, 15.1).
